INTRODUCING THE M875...

The M875 introduces a modular design, allowing for customisable configurations tailored to suit unique system needs.

Using a first-stage pressure regulator, the M875 can be equipped with various manifold blocks to integrate components such as proportional valves, solenoid valves, pressure relief valves, purge valves, second stage pressure regulators and pressure transducers.

This adaptability makes it an ideal solution for a wide range of applications within the hydrogen vehicle sector.
