Conflict Minerals Policy Statement

In Accordance with Dodd-Frank Wall Street Reform and Consumer Protection Act, Section 1502.

Conflict minerals are minerals mined in conditions of armed conflict and human rights abuses, and which are sold or traded by armed groups.

Conflict minerals in the eastern Democratic Republic of Congo (DRC) are generally defined (including in US legislation and the Organisation for Economic Co-operation and Development (OECD) due diligence guidance for responsible mineral supply chains) as cassiterite (tin), coltan (tantalum), wolframite (tungsten) and gold, or derivatives of these minerals. Sometimes these minerals are referred to as the 'three Ts' - tin, tantalum and tungsten (and gold).

Pressure Tech Ltd procures and manufactures components from steels and other alloys which may contain these minerals and as such, endeavor not to source any material that contains conflict minerals which directly or indirectly finance or benefit armed groups in the DRC or an adjoining country.

Pressure Tech Ltd does not knowingly supply any products or procure components which contain conflict minerals that originate from facilities in the 'conflict region'. Reasonable enquiry and due diligence processes are being implemented to ensure those within our supply chain are in compliance with the regulations.
